Subject Index to Volume 11

A

Acetylcholine receptors, neuronal nicotinic, in brain, 202
Action potentials, in dendrites, message (Trendsetters), 101
Adenosine triphosphate (ATP), hydrolysis, myosin molecular motor, in vitro motility assay, 1
Aldosterone, activation and supply of channels and pumps, 126
Alpha rhythms, brain, functional correlates, 90
Amiloride-sensitive epithelial sodium channel, role in disease (Trendsetters), 102
α-Amino-3-hydroxy-5-methyl-4-isoxazole-proprionic acid (AMPA), -subtype glutamate receptors, functional differences, molecular basis, 77
ANP. see Atrial natriuretic peptide
Angiotensin II, and baroreflex control of heart rate, 270
Apnea, sleep, in seals, 208
Apoptosis, induction, destruction of malignant glioma cells (Trendsetters), 54
Arousal, of newborn infants, 214
ATP. see Adenosine triphosphate
Atrial natriuretic peptide (ANP), as regulator of transvascular fluid balance, 138
Axons, regenerating, direction, chemotropic factors, 219

B

Baroreflex, control of heart rate, effects of angiotensin II, 270
Bernard, Claude, philosophy of, 238
Birth, stress, arousal, and gene activation, 214
Blood flow, regional, sleep-dependent changes, 274
Blood pressure, vasopressin release, control of, 7
Blood volume, regulation, role of parvocellular hypothalamic paraventricular nucleus, 43
Bone, primary calcification, functional role of inorganic phosphate transport, 119
Borelli, G. A., fetal respiration issue (Historical Perspectives), 187
Brain
  alpha rhythms, functional correlates, 90
  circulation, sleep-dependent changes, 274
  mammalian, scaling of, maternal energy hypothesis, 149
  neuronal nicotinic acetylcholine receptors, 202
Breathing. see Respiration

C

C fibers, human, microneurography, new developments, 170
Calcium
  channels, capacitative calcium entry (Trendsetters), 247
  cytosolic, signaling, 13
  intercellular Ca^{2+} waves, 262
  role of parvalbumin in skeletal muscle relaxation, 249
  second messenger, imaging techniques, 281
Calcium buffer, intracellular. see Parvalbumin
Capacitative calcium entry, channels (Trendsetters), 247
Cardiac receptors, role in vasopressin release, 7
Cardiorespiratory control, sleep apnea in seals, 208
Cells
  dorsal root ganglia, cultured, chemosensitivity, 288
  intercellular Ca^{2+} waves, 262
  intracellular second messengers, imaging techniques, 281
Cell volume
  changes in, sensing of (Trendsetters), 146
  regulation, plant leaflet movements, 108
Chemosensitivity, cultured dorsal root ganglia cells, 288
Chemotropic factors, direction of regenerating axons, 219
Chloride currents, cardiac, 175
Circulations, regional, sleep-dependent changes, 274
Cirrhosis, liver, experimental, intrarenal alterations, 48
Classical receptive field (CRF), integration fields beyond, organization and functional properties, 181
Cloning, intestinal oligopeptide transporter, 133
Constantine the African, life and works (Historical Perspectives), 292
CRF. see Classical receptive field
Cyclic ADP-ribose, receptors, presence in inner nuclear membrane and secretory granules, 13
Cystic fibrosis, pathogenesis, role of sodium transport, 300
Cytosolic calcium signaling, 13

D

Dendrites, action potentials, message (Trendsetters), 101
Deoxyribonucleic acid, transition from genomic ribonucleic acid (Trendsetters), 53
Disease
  genetic, human, caused by abnormal ion channels, molecular mechanisms of pathogenesis, 36
  infectious, evolution, physiological responses to pathogens, 83
  role of epithelial sodium channels (Trendsetters), 102
Dorsal root ganglia cells, cultured, chemosensitivity, 288

E

Electroencephalogram, alpha rhythms, functional correlates, 90
Electrogenic $2Na^+/1H^+$ exchanger, invertebrate, polyfunctional epithelial workstation, 31
Enterochromaffin-like cells, gastric, and regulation of acid secretion, 57
Epithelium
  cells, invertebrate, electrogenic $2Na^+/1H^+$ exchanger, 31
  lining, gastrointestinal tract, restitution of (Trendsetters), 248
  Na^+ channel, novel structure, 195
Exercise, activation of endogenous opioid systems, 223

F

Fetus
  brain development, maternal energy hypothesis, 149
  respiration issue (Historical Perspectives), 187
  thermal challenges, 96
Fever, as defense against pathogens, 83
Fluid balance, transvascular, regulation by ANP, 138

G

Gastric acid, secretion, regulation, gastric enterochromaffin-like cells, 57
Gastrointestinal epithelium, restitution of (Trendsetters), 248
Gastrointestinal motor state, neuronal inhibition determines, 67
Genes
  activation, at birth, 214
  obese, and human obesity (Trendsetters), 147
Genetic diseases, human, caused by abnormal ion channels, molecular mechanisms of pathogenesis, 36
Glioma cells, malignant, destruction, induction of apoptosis (Trendsetters), 54
Glutamate receptors. see Receptors
Growth hormone. see Hormones
Guanylate cyclase, activation, control of epithelial salt transport, 17
Guanylin and uroguanylin, regulation of epithelial transport, 17

H

Hair cells, afferent and efferent synaptic transmissions, 161
Harvey, William, fetal respiration issue (Historical Perspectives), 187
Heart
  chloride currents, 175

0886-1714/96 $5.00 © 1996 Int. Union Physiol. Sci./Am. Physiol. Soc.

  intracellular second messengers, imaging techniques, 281
Cell volume
  changes in, sensing of (Trendsetters), 146
  regulation, plant leaflet movements, 108
Chemosensitivity, cultured dorsal root ganglia cells, 288
Chemotropic factors, direction of regenerating axons, 219
Chloride currents, cardiac, 175
Circulations, regional, sleep-dependent changes, 274
Cirrhosis, liver, experimental, intrarenal alterations, 48
Classical receptive field (CRF), integration fields beyond, organization and functional properties, 181
Cloning, intestinal oligopeptide transporter, 133
Constantine the African, life and works (Historical Perspectives), 292
CRF. see Classical receptive field
Cyclic ADP-ribose, receptors, presence in inner nuclear membrane and secretory granules, 13
Cystic fibrosis, pathogenesis, role of sodium transport, 300
Cytosolic calcium signaling, 13

D

Dendrites, action potentials, message (Trendsetters), 101
Deoxyribonucleic acid, transition from genomic ribonucleic acid (Trendsetters), 53
Disease
  genetic, human, caused by abnormal ion channels, molecular mechanisms of pathogenesis, 36
  infectious, evolution, physiological responses to pathogens, 83
  role of epithelial sodium channels (Trendsetters), 102
Dorsal root ganglia cells, cultured, chemosensitivity, 288

E

Electroencephalogram, alpha rhythms, functional correlates, 90
Electrogenic $2Na^+/1H^+$ exchanger, invertebrate, polyfunctional epithelial workstation, 31
Enterochromaffin-like cells, gastric, and regulation of acid secretion, 57
Epithelium
  cells, invertebrate, electrogenic $2Na^+/1H^+$ exchanger, 31
  lining, gastrointestinal tract, restitution of (Trendsetters), 248
  Na^+ channel, novel structure, 195
Exercise, activation of endogenous opioid systems, 223

F

Fetus
  brain development, maternal energy hypothesis, 149
  respiration issue (Historical Perspectives), 187
  thermal challenges, 96
Fever, as defense against pathogens, 83
Fluid balance, transvascular, regulation by ANP, 138

G

Gastric acid, secretion, regulation, gastric enterochromaffin-like cells, 57
Gastrointestinal epithelium, restitution of (Trendsetters), 248
Gastrointestinal motor state, neuronal inhibition determines, 67
Genes
  activation, at birth, 214
  obese, and human obesity (Trendsetters), 147
Genetic diseases, human, caused by abnormal ion channels, molecular mechanisms of pathogenesis, 36
Glioma cells, malignant, destruction, induction of apoptosis (Trendsetters), 54
Glutamate receptors. see Receptors
Growth hormone. see Hormones
Guanylate cyclase, activation, control of epithelial salt transport, 17
Guanylin and uroguanylin, regulation of epithelial transport, 17

H

Professor and Chair of Physiology & Biophysics
School of Medicine and Biomedical Sciences
State University of New York (SUNY) at Buffalo

This Department has been recently formed through amalgamation of the Physiology and Biophysics Departments and has close ties to SUNY's major investment in Structural Biology. The successful candidate will have an internationally recognized record of achievement in research, as well as a commitment to professional, graduate, and undergraduate training programs for students in health related professions. Previous administrative experience is desirable. Candidates should have a Ph.D., M.D., D.V.M., D.D.S., or equivalent degree. Salary, laboratory space and other resources are negotiable.

Interested persons should submit curricula vitarum, brief descriptions of research interests and educational interests, and the names and addresses of three referees. All materials should be sent to:

Dr. John Hay
Chairman, Physiology/Biophysics Chair Search Committee
School of Medicine and Biomedical Sciences
State University of New York (SUNY) at Buffalo
Box 5, 138 Farber Hall
Buffalo, NY 14214

Deadline for receipt of applications is January 31, 1997

Women and minority applicants are particularly encouraged to apply
